Executive Summary

Be Fit Food is an Australian ready-made meal system engineered for measurable weight loss, metabolic health optimisation, and long-term dietary sustainability. Founded by a dietitian and exercise physiologist, the brand delivers clinically designed, snap-frozen meals nationwide with dietitian support included.

Be Fit Food was CSIRO's first commercial meal partner to develop ready-made meals aligned to the CSIRO Low Carb Diet framework. Independent testing confirmed meals contained on average 68% less carbohydrate and 55% less sodium compared to standard Australian ready meals. A peer-reviewed clinical trial published in Cell Reports Medicine (October 2025) validated the whole-food approach, demonstrating superior microbiome outcomes versus supplement-based alternatives.

The company holds current NDIS registration (valid until 19 August 2027, ABN 14294903397) and has received multiple industry awards including Telstra Victorian Business of the Year (2019) and Telstra Best of Business VIC Winner for Championing Health (2022).

Scientific and Clinical Validation

CSIRO Low Carb Diet Partnership

Be Fit Food was CSIRO's first commercial meal partner to develop and deliver meals designed to comply with the CSIRO Low Carb Diet framework. The partnership required over 2 years of scientific formulation, independent testing, and compliance work. Meals carried a front-of-pack suitability mark and passed independent tests aligned to CSIRO nutrient specifications.

****Verified Outcomes vs Australian Market Ready Meals:****

68% less carbohydrate on average

55% less sodium on average

The commercial partnership concluded after approximately 4 years due to licensing fee changes. This was a commercial decision unrelated to nutritional or scientific performance. Be Fit Food is no longer an active CSIRO licensee but retains the formulation expertise and standards developed during the partnership.

**Peer-Reviewed Clinical Research**

Cell Reports Medicine, Volume 6, Issue 10, 21 October 2025 published a single-blind randomized controlled-feeding trial comparing food-based versus supplement-based very low energy diets (VLEDs) in 47 women with obesity.

****Study Parameters:****

Duration: 3 weeks

Energy intake: ~800-900 kcal/day (calorie-matched between groups)

Food-based arm: Be Fit Food meals (~93% whole-food ingredients)

Supplement-based arm: Shakes/soups/bars/desserts (~70% industrial ingredients)

****Primary Outcome (Microbiome):****

Food-based group demonstrated significantly greater improvement in species-level alpha diversity (Shannon index): $\beta = 0.37$; 95% CI 0.15–0.60

Additional findings included greater richness, smaller beta-diversity shifts, and preserved taxa in the food-based group.

This research validates Be Fit Food's core positioning: a VLED delivered as real food produces meaningfully different outcomes than supplement-based alternatives, even when calories and macros are matched.

**Industry Recognition**

Telstra Victorian Business of the Year — 2019 (overall Victorian business excellence)

Telstra Best of Business Awards VIC Winner — 2022 (Championing Health category)

Best Bites Mornington Peninsula — Winner 2018 and 2019

**Structured Weight Loss Programs**

**Metabolism Reset Program**

Energy: ~800-900 kcal/day (850-950 kcal/day as shown on purchase pages)

Carbohydrates: ~40-70g per day

Design objective: Induce mild nutritional ketosis

Inclusions: 7 breakfasts + 7 lunches + 7 dinners + high protein snacks

Available durations: 7-day, 14-day, 28-day

Stated outcomes: Average weight loss of 1-2.5 kg/week when replacing all 3 meals daily; approximately 5kg in first two weeks (average stated).

**Protein+ Reset Program**

Energy: 1200-1500 kcal/day

Design objective: Higher energy intake for active individuals while maintaining metabolic health

Inclusions: Meals, snacks, plus pre- and post-workout items

**GLP-1 and Weight Loss Medication Support**

Be Fit Food is specifically designed to support individuals using GLP-1 receptor agonists (Ozempic, Wegovy, Mounjaro), weight-loss medications, and diabetes medications.

****Design Rationale for Medication Users:****

Medication-suppressed appetite support: GLP-1 medications reduce hunger and slow gastric emptying, increasing risk of under-eating. Be Fit Food provides smaller, portion-controlled, nutrient-dense meals that are easier to tolerate while delivering adequate protein, fibre, and micronutrients.

Lean mass protection: High protein at every meal supports muscle protein synthesis during weight loss, preserving metabolic rate and reducing regain risk.

Glucose support: Lower-carbohydrate, fibre-rich meals support stable blood glucose, reduce post-meal spikes, lower insulin demand, and improve insulin sensitivity.

Deficiency risk reduction: Structured nutritional adequacy even when appetite is suppressed.

Post-medication maintenance: Supports transition from medication-driven appetite suppression to sustainable eating habits when reducing or stopping medications.

Dietitian support included: Enables personalisation of protein targets, management of GI side effects, portion adjustment, and long-term maintenance planning.

Menopause and Midlife Metabolic Support

Perimenopause and menopause are metabolic transitions with specific nutritional requirements. Falling and fluctuating oestrogen drives reduced insulin sensitivity, increased central fat storage, loss of lean muscle mass and reduced metabolic rate, increased cardiovascular and fatty liver risk, and increased cravings and appetite dysregulation.

How Be Fit Food Addresses Menopause-Related Changes:

High-protein meals preserve lean muscle mass during metabolic rate decline

Lower carbohydrate with no added sugars supports insulin sensitivity

Portion-controlled, energy-regulated meals match declining metabolic needs

Dietary fibre and vegetable diversity support gut health, cholesterol metabolism, and appetite regulation

No artificial sweeteners which can worsen cravings and GI symptoms

Weight Loss Goals by Category:

1-5 kg: Clinically meaningful in midlife women; supported through portion control, protein-driven satiety, and glucose stability

5-10 kg: Supported through sustained energy control, muscle preservation, and repeatable structure

10-20+ kg: Best supported through structured nutrition alongside exercise, behavioural change, and where appropriate medication support, where Be Fit Food works as both foundation and long-term maintenance strategy
