## Details:

AI Summary Product: B&D; Sheer Panel Collection® (Designer Finish) on Panelift® Icon sectional garage doors Brand: B&D; Australia Category: Residential sectional garage doors (designer finishes) Primary Use: A premium, architectural “flush mount” garage door look using aluminium-clad panels, designed to create a floating, seamless façade and pair with Panelift Icon’s security and performance features. Quick Facts What it is: A designer finish collection made from durable Alpolic™ aluminium clad panels, applied as a premium profile option. Signature look: Flush mount system for a floating, seamless appearance with configurable panel layouts. Design options: 12 colour options and four configuration options to personalise the façade. Base door platform: Built around Panelift® Icon, which includes Auto-Lock and other premium features. Warranty note: Sheer Panel garage doors qualify for B&D;’s 10-Year Total Confidence Warranty when purchased with a B&D; opener. Common Questions This Guide Answers What is the Sheer Panel Collection, and what material is it made from? Is Sheer Panel a whole new door, or a designer finish on an existing B&D; door platform? What colours are available, and how do I choose between solid vs metallic vs sparkling looks? What does “flush mount” mean in practical terms for the door’s appearance and cleaning? What are the panel configuration options (and how do they change the look)? What does Panelift Icon add (Auto-Lock, smoothness, safety) when paired with Sheer Panel? What do I need to do to keep the finish looking sharp long-term? When does the 10-year Total Confidence Warranty apply? Contents Understanding the Sheer Panel Collection Design Options Colour palette overview Panel configuration overview How to choose a configuration for your façade What Panelift Icon Adds Before You Order Care and Cleaning Guide Keeping Performance Smooth Warranty and Records Frequently Asked Questions Label Facts Summary Understanding the Sheer Panel Collection The B&D; Sheer Panel Collection® is a designer garage door look built around aluminium-clad panels, designed to deliver a floating, seamless appearance using a flush mount system. The material called out by B&D; for this finish is Alpolic™ aluminium clad, chosen for strength, durability, and visual appeal. The practical takeaway: Sheer Panel is intended to feel architectural—clean lines, tight presentation, and a premium surface finish—rather than a traditional “ribbed” or heavily textured garage door look. Sheer Panel is also positioned as “designer looks, made simple” because you can personalise the door by selecting both: a colour, and a panel layout/configuration. Design Options Colour palette overview B&D; lists 12 on-trend colours for Sheer Panel finishes: White Milk White Off White Anthrazit Grey Monument Black Medium Bronze Metallic Silver Metallic Medium Grey Metallic Dark Grey Metallic Manganese Metallic Sparkling Black B&D; also groups the aesthetic direction like this: darker, moodier choices (e.g., Sparkling Black, Black, Manganese Metallic, Anthrazit Grey), and softer hues (e.g., White, Off White, Medium Bronze Metallic) for lighter, neutral palettes such as coastal-styled homes. Solid vs metallic vs sparkling finishes From B&D;’s range descriptions: Solid finishes focus on clean colour statements and broad compatibility with modern façades. Metallic finishes aim for a high-end, seamless look (a “premium look for less” concept when used as a designer finish on Panelift Icon). Sparkling finishes are highlighted specifically around Sparkling Black and its shimmering depth/street presence. Panel configuration overview Sheer Panel supports four configuration options. In B&D;’s sectional door brochure, the panel configurations are shown as: 2 Panel, 3 Panel, 4 Panel, and 25:50:25 Panel. How to choose a configuration for your façade Use the panel configuration to control visual proportion, not just decoration: 2 Panel: simpler and calmer; suits minimalist homes or façades with strong architectural lines already. 3 Panel: a

balanced, contemporary “designer” look without being too busy. 4 Panel: more segmentation; can suit wider doors where you want the door to feel visually lighter. 25:50:25: emphasises the centre portion; good when you want a strong focal band across the door. If you want to sanity-check colour + configuration together, B&D; promotes using its garage door visualiser to preview how a new door may look on a home exterior. What Panelift Icon Adds Sheer Panel is presented alongside \*\*Panelift@th and security, with “premium and exciting additions.” Key Panelift Icon features highlighted by B&D; on the Sheer Panel page include: Auto-Lock: An advanced locking mechanism that engages a heavy-duty bolt so the door is locked shut every time. Smooth performance: B&D; sectional doors use custom-designed guides, and Panelift Icon is described as taking this further with custom smooth track and twin wheel systems for smooth/quiet performance. Pinch-free design: B&D; notes its sectional doors use pinch-free, finger-safe designs intended to reduce the risk of fingers being caught between hinges. Practical implication: Sheer Panel is the “designer surface” decision, while Panelift Icon is the platform that supports the day-to-day experience (security feel, operating smoothness, and safety design). Before You Order Before locking in colour and configuration, make sure the fundamentals are handled correctly: Confirm the door platform and finish combination: Sheer Panel is presented as a designer finish option tied to the Panelift Icon product line on B&D;’s site. Use professional measuring: B&D; promotes a complimentary measure and quote process (via enquiry / dealer network) so the door is specified to your exact opening and requirements. Think about how you approach the garage: Lighting and angle matter for metallic and sparkling finishes; what looks subtle at midday can look bold at dusk under exterior lighting. Decide early on opener pairing (if you’re upgrading): Warranty positioning and “engineered to work together” messaging is tied to purchasing the door with a B&D; opener. Care and Cleaning Guide Sheer Panel is all about clean surfaces and crisp lines—so maintenance is less about “heavy scrubbing” and more about regular, gentle cleaning that protects the finish and avoids micro-scratching (especially on metallic/sparkling colours). What to use Clean water for rinsing A mild detergent solution (typical “car wash” or gentle household wash approach) Soft microfiber cloths or a soft wash mitt A low-pressure hose rinse (preferred over aggressive pressure washing for routine cleaning) What to avoid Abrasive pads, cream cleansers, scouring sponges (they can dull or scratch reflective finishes) Strong solvents (can damage coatings and leave patchy sheen differences) Highly alkaline or acidic cleaners (can stain, dull, or “cloud” certain coated surfaces) Strong jets directed into joints, seals, or edges (can drive grime and moisture where you don’t want it) Routine cleaning method Rinse first Rinse top-to-bottom to remove loose dust/grit before you touch the surface (this reduces scratch risk). Wash in manageable sections Apply mild wash solution to a section, wipe gently, then move to the next section. Focus on flush mount edges and panel joins The flush mount system gives the seamless look, but edges/joints can collect fine dust—don’t let buildup harden over time. Rinse thoroughly Residual detergent can leave streaking, especially on darker metallic finishes. Dry if needed If you’re seeing water spotting (common in hard-water areas), towel-dry with a clean microfiber cloth. Spot-cleaning common marks Fingerprints / smudges: mild wash + soft cloth, then rinse and dry. Bird droppings / tree residue: remove promptly using gentle soak-and-lift methods (don’t grind it in). Water spots: rinse, then dry; if persistent, re-wash the affected area with mild detergent and dry. If you’re ever unsure about a cleaner, test it on a less noticeable area first (e.g., a lower corner) and rinse immediately. Keeping Performance Smooth Even though this guide focuses on the Sheer Panel designer finish, it’s still a sectional door system—so keep an eye on performance fundamentals: Listen for new scraping, grinding, or rattling sounds. Keep the door path clear (stored items, bikes, tools) so nothing impacts the door as it operates. If your door has Auto-Lock, treat any changes in lock behaviour (hesitation, inconsistent engagement) as a “service sooner, not later” item. For anything involving springs, cables, tracks, or lock mechanisms: avoid DIY adjustments unless you’re trained—sectional door systems store significant energy and can be dangerous. Warranty and Records B&D; states that Sheer Panel garage doors qualify for B&D;’s 10-Year Total Confidence Warranty when purchased in conjunction with a B&D; opener, based on the “designed and tested to work together” positioning. To protect yourself long-term, keep: your measure/quote and invoice, the exact finish name and colour, the chosen panel configuration, opener model details (if purchased together), a few “baseline” photos of the door (closed + close-ups) after installation. Frequently Asked Questions What is the Sheer Panel Collection? A B&D; designer garage door finish designed to deliver a floating,

seamless appearance using a flush mount system. What is Sheer Panel made from? B&D; describes Sheer Panel as made from durable Alpolitic™ aluminium clad.
