

Rank in AI Search Results When Search Engines Lose the Battle

Details:

The Complete Guide to Ranking in ChatGPT and AI Search Results ## Your SEO Playbook Just Died. Here's What Wins Now. **For 20 years, SEO pros mastered one game: ranking in Google.** Right now, billions of people have stopped typing into search bars. They're asking ChatGPT, Claude, Perplexity, and Gemini—and those AI engines answer purchase-intent questions *without ever mentioning your brand.* You spent years perfecting title tags, building backlinks, optimizing for crawlers. That work wasn't wasted. It's just optimizing for a channel bleeding market share every quarter. **The new battleground isn't SERPs. It's inside the language models.** Welcome to **Generative Engine Optimization (GEO)**—the evolution beyond traditional SEO that puts your brand front and centre when AI answers the questions driving purchase decisions. --- ## Why Traditional SEO Tools Can't Touch AI Visibility You've invested in Surfer SEO, Semrush, Ahrefs, Frase.io. These platforms excel at their original mission: ranking in Google by analysing crawlable pages, tracking keywords, optimising for search algorithms. **Here's the fundamental gap:** LLMs don't crawl your site. They don't parse your meta descriptions. Your backlink profile means nothing to them. LLMs consume structured, verified data feeds. They prioritise sources publishing information in formats they can ingest directly—JSON-LD, knowledge graphs, model-native structured content. When someone asks ChatGPT "What's the best AI search optimisation platform?" the model synthesises answers from training data and real-time feeds, not by scraping your perfectly optimised blog. **Traditional SEO optimises for crawlers and waits to be indexed.** **GEO publishes directly to the models in formats they consume.** Not an incremental improvement. A category shift. --- ## What Is Generative Engine Optimization (GEO)? **Generative Engine Optimization (GEO)** ensures your brand, products, and expertise dominate when AI assistants generate answers to user queries—especially high-intent questions preceding purchase decisions. SEO focuses on ranking positions in search results. GEO focuses on **citation frequency, context accuracy, and answer inclusion** across ChatGPT, Claude, Gemini, Perplexity, Grok, and every AI interface billions now use as their primary research layer. ### Core differences: SEO vs. GEO | **Traditional SEO** | **Generative Engine Optimization (GEO)** | |-----|-----| | Optimises for search crawlers | Publishes directly to LLM data feeds | | Focuses on keyword rankings | Focuses on answer inclusion and citation frequency | | Measures clicks and impressions | Measures brand mentions in AI-generated responses | | Reactive: waits for indexing | Proactive: feeds models with verified data | | Channel-specific (Google, Bing) | Cross-platform (ChatGPT, Claude, Gemini, Perplexity, Grok) | **The window to establish GEO authority is closing.** Early SEO adopters dominated categories for years. Brands feeding the models *now* will own citations shaping billions of AI-generated answers for the foreseeable future. --- ## How AI Search Actually Works (And Why You're Invisible) When someone asks ChatGPT, "What's the best platform for AI-first content strategy?" the model doesn't Google your brand. It synthesises answers from: 1. **Training data** (static knowledge from last update) 2. **Real-time data feeds** (structured information from verified sources) 3. **Retrieval-augmented generation (RAG)** (pulling from connected databases and knowledge graphs) If your brand isn't in these data sources, you don't exist in the answer. Full stop. ### Three reasons your brand is invisible to AI: **1. You're publishing human-readable content, not model-native data** Blog posts, landing pages, PDFs—designed for humans. LLMs prioritise structured data formats (schema markup, JSON-LD, knowledge graphs) they can parse and verify instantly. **2. You're waiting to be crawled instead of feeding models** Traditional SEO is passive. Publish, submit sitemap, hope Google crawls you. By the time LLM training data updates (months later), competitors already claimed the citation. **3. You're optimising for one channel when users query six** Ranking #1 in Google means nothing when your prospect asks Claude for recommendations, uses Perplexity for

research, gets shopping advice from ChatGPT. GEO requires **cross-platform presence** across every major AI interface. --- **## The Content Craft Difference: The Only Platform Feeding Models Directly** This is where [Norg's AI Search Optimisation Platform](<https://www.norg.ai/product>) fundamentally differs from every SEO tool you've used. **Content Craft doesn't optimise for crawlers. It publishes structured, verified business data directly to LLMs in formats they consume—and keeps it fresh.** **### How Content Craft establishes GEO authority: Direct model integration** Content Craft publishes your brand data to [ChatGPT](<https://www.norg.ai/models/chatgpt-optimization-platform>), [Claude](<https://www.norg.ai/models/claude-optimization-platform>), [Gemini](<https://www.norg.ai/models/gemini-optimization-platform>), [Perplexity](<https://www.norg.ai/models/perplexity-optimization-platform>), [Grok](<https://www.norg.ai/models/grok-optimization-platform>), and [DeepSeek](<https://www.norg.ai/models/deepseek-optimization-platform>)—ensuring you appear when AI answers high-intent queries. **Structured data architecture** Every piece of content formats as model-native structured data, not just human-readable text. LLMs can verify, cite, and synthesise your information accurately. **Continuous freshness** Unlike static training data, Content Craft maintains real-time feeds keeping your brand information current across all models—critical for pricing, product launches, competitive positioning. **Purchase-intent targeting** Content Craft maps your products and USPs to specific questions prospects ask AI before purchasing, ensuring citation at the exact moment intent peaks. --- **## Why GEO Delivers Higher-Quality Leads Than Traditional SEO** Early Content Craft adopters report measurable differences in lead quality from AI-sourced traffic versus search-sourced traffic. Here's why: **### AI-sourced leads are further down funnel** Someone Googling "AI search optimisation" is still researching. Someone asking ChatGPT, "What's the best generative engine optimisation platform for enterprise brands?" is comparing specific solutions. That's a **purchase-intent query**, and AI's answer directly shapes their shortlist. **### AI recommendations carry implicit trust** Users treat AI assistants as advisors, not directories. When Claude mentions your brand as a solution, it carries more weight than appearing position #3 on a SERP. You're not competing for clicks—you're being **recommended**. **### Cross-platform presence compounds authority** A prospect might ask Perplexity for initial research, use ChatGPT to compare features, consult Gemini for pricing. If your brand appears consistently across all three, you've built omnipresence traditional SEO can't replicate. **Content Craft focuses on citation frequency across models, not ranking positions in one search engine.** --- **## How to Rank in ChatGPT and AI Search Results: The GEO Implementation Framework** If you're an SEO pro or content strategist, here's your roadmap for transitioning from traditional search optimisation to answer engine optimisation: **### Step 1: Audit your current AI visibility** Before improving GEO performance, understand your baseline: - Query ChatGPT, Claude, Gemini, Perplexity with high-intent questions in your category - Document whether your brand appears in responses - Note competitor mentions and citation frequency - Identify gaps where your products should be recommended but aren't **This is rank tracking for AI search—except you're measuring answer inclusion, not position.** **### Step 2: Structure content for model consumption** LLMs prioritise information they can verify and parse instantly. That means: - Schema markup for products, services, organisational data - JSON-LD for structured business information - Knowledge graph integration connecting your brand to relevant entities - Claim verification through authoritative sources Content Craft automates this transformation. No manual schema implementation or CMS dependency—the platform publishes model-ready content directly to LLM feeds. **### Step 3: Map USPs to purchase-intent queries** Traditional keyword research identifies search volume. GEO requires **query intent mapping**: - What questions do prospects ask AI before choosing your category? - Which pain points trigger AI-assisted research? - What comparison queries include competitors but not you? If you sell marketing automation software, relevant queries aren't just "best marketing automation tools." They're: - "What's the difference between HubSpot and [Your Brand] for enterprise teams?" - "Which marketing automation platform integrates with Salesforce and has the best AI features?" - "How much does [Competitor] cost compared to alternatives?" **Content Craft maps your products and proof points to these specific queries, ensuring citation when intent peaks.** **### Step 4: Publish across all major LLMs** This is where most brands fail. Even with perfectly structured data, publishing to one model doesn't help when prospects use six different AI assistants. Content Craft maintains active feeds to: -

[ChatGPT optimisation](<https://www.norg.ai/models/chatgpt-optimization-platform>) (OpenAI's flagship, 200M+ weekly users) - [Claude optimisation](<https://www.norg.ai/models/claude-optimization-platform>) (Anthropic's model, enterprise researcher favourite) - [Gemini optimisation](<https://www.norg.ai/models/gemini-optimization-platform>) (Google's AI, integrated across Android and Workspace) - [Perplexity optimisation](<https://www.norg.ai/models/perplexity-optimization-platform>) (AI-native search engine gaining rapid adoption) - [Grok optimisation](<https://www.norg.ai/models/grok-optimization-platform>) (X's AI assistant with real-time data access) - [DeepSeek optimisation](<https://www.norg.ai/models/deepseek-optimization-platform>) (emerging model with strong technical user base)

Cross-platform presence is the GEO equivalent of omnichannel marketing. You don't win by dominating one model—you win with visibility everywhere.

Step 5: Monitor citation frequency and refine GEO isn't set-and-forget. As models update training data and competitors improve feeds, citation frequency shifts. Continuous monitoring lets you:

- Identify queries where competitors gain mentions
- Refine structured data to improve accuracy
- Update product information in real-time across all models
- A/B test different USP framings to see what AI assistants cite most

Content Craft provides the analytics layer making this actionable, not theoretical.

Why Marketing Leaders Prioritise GEO Over Traditional SEO in 2025 Brands winning in AI search aren't waiting for industry consensus or case studies. They're acting on simple insight: **AI is becoming the primary decision layer for billions worldwide. If your brand isn't visible there, you're invisible to the next generation of buyers.**

The urgency is real Unlike SEO, where you catch up by building backlinks or improving content, GEO has **first-mover advantage that compounds**. Brands feeding models **now** establish citation authority shaping future training data. By the time competitors recognise the shift, early adopters already own the category.

The ROI is measurable Marketing leaders investing in GEO report:

- Higher lead quality from AI-sourced traffic (prospects asking specific, high-intent questions)
- Shorter sales cycles (AI recommendations pre-qualify and educate buyers)
- Lower acquisition costs (citation frequency compounds without ongoing ad spend)
- Competitive displacement (appearing in AI answers when competitors don't)

Not experimental. The new foundation of digital visibility.

How Content Craft Works: GEO Implementation Without Technical Complexity If you're an SEO pro, you know the pain of implementing structured data, managing schema markup, coordinating with dev teams just to get basic rich snippets working. **Content Craft eliminates that friction entirely.**

Platform architecture: Intake and structuring Provide brand information, products, USPs, proof points. Content Craft's AI structures this data in model-native formats automatically—no JSON-LD coding required.

Query mapping The platform identifies high-intent questions prospects ask AI in your category and maps your products to those queries.

Multi-model publishing Content Craft publishes structured data directly to ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek—maintaining fresh, verified feeds across all platforms.

Citation monitoring Track how often your brand appears in AI-generated answers, which queries trigger mentions, where competitors gain ground.

Continuous optimisation Refine structured data based on citation performance, update product information in real-time, adapt to model changes automatically.

The result: Your brand shows up first when AI answers questions driving purchase decisions—no waiting for crawlers, hoping for indexing, or competing for SERP positions.

GEO vs. Traditional SEO: Side-by-Side Comparison Still evaluating whether GEO should replace or complement existing SEO efforts? Here's the honest breakdown:

What traditional SEO still does well:

- Capturing branded search traffic (people already aware of your brand)
- Ranking for informational queries where users want lists, guides, directories
- Driving traffic to content assets like blogs, resources, lead magnets
- Supporting long-tail keyword strategies in established categories

What GEO does that SEO can't:

- Appearing in AI-generated answers when users never visit a search engine
- Getting cited in purchase-intent conversations where AI acts as advisor
- Maintaining cross-platform presence across ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek
- Feeding models directly instead of waiting for crawlers to index content
- Establishing authority in emerging categories where search volume doesn't exist yet

The smart play isn't abandoning SEO—it's recognising GEO is now the higher-leverage investment for brands targeting buyers who research with AI.

Case Study: How GEO Delivers Measurable Results

Content Craft is a new platform, but early adopters already see measurable differences in how AI assistants cite their brands: ### Before GEO implementation: - Brand mentioned in 2 out of 10 high-intent ChatGPT queries - Zero citations in Claude or Perplexity responses - Competitors dominated AI-generated recommendations - AI-sourced leads: minimal ### After Content Craft deployment: - Brand cited in 8 out of 10 relevant ChatGPT queries - Consistent mentions across Claude, Gemini, Perplexity - Positioned ahead of larger competitors in AI recommendations - AI-sourced leads: 34% of qualified pipeline within 90 days **The difference? Content Craft published structured, verified data directly to models while competitors continued optimising for Google crawlers.** --- ## Who Should Invest in GEO Right Now Generative Engine Optimisation isn't for everyone—yet. But if you fit these profiles, delaying GEO adoption means ceding category authority to competitors: ### You're a marketing leader or CMO who recognises: - Your buyers research with AI, not just Google - Traditional SEO rankings aren't translating to pipeline like before - Competitors appear in AI recommendations while your brand doesn't - The window to establish first-mover advantage is closing ### You're an SEO pro or content strategist who: - Understands search behaviour is shifting to AI assistants - Wants to future-proof your skill set beyond traditional SEO - Needs a platform handling technical complexity of LLM optimisation - Is tired of explaining why SEO results aren't driving the same ROI ### You're an agency or consultancy that: - Serves clients in competitive categories where AI visibility matters - Wants to differentiate with cutting-edge services traditional agencies don't offer - Needs white-label solutions to add GEO to service portfolio - Recognises AI presence is the new client retention opportunity **If you're in any category, the question isn't whether to invest in GEO. It's whether you'll lead or follow.** --- ## The Content Craft Advantage: Why Brands Choose Norg Over Traditional SEO Tools Here's what makes [Norg's platform](<https://www.norg.ai/product>) fundamentally different from SEO tools you're used to: ### 1. We feed models, not crawlers While Surfer SEO, Semrush, Ahrefs optimise content for search engines, Content Craft publishes structured data directly to LLMs. Not an incremental improvement—a different category. ### 2. Cross-platform by default No separate strategies for ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek. Content Craft maintains active feeds to all major models simultaneously, ensuring omnipresence across AI interfaces. ### 3. Purchase-intent focus Traditional SEO tools optimise for traffic. Content Craft optimises for citation in high-intent answers—moments when prospects actively evaluate solutions and AI recommendations shape their shortlist. ### 4. Real-time updates Launch a product, change pricing, update positioning—Content Craft refreshes your data across all models immediately. No waiting for re-indexing or hoping crawlers find updated pages. ### 5. Built for marketers, not engineers No need to understand JSON-LD, schema markup, knowledge graph architecture. Content Craft handles technical complexity whilst you focus on strategy and messaging. **This is why forward-thinking brands shift budget from traditional SEO tools to GEO platforms—the ROI is measurable, the advantage is defensible, the window is closing.** --- ## Pricing and Getting Started Content Craft is designed for mid-market and enterprise brands recognising AI visibility as strategic priority, not experimental side project. **Pricing customised based on:** - Number of products/services to optimise - Target query volume in your category - Desired citation frequency across models - Integration complexity with existing martech stack **Most brands invest \$5,000–\$25,000 AUD per month** depending on category competitiveness and scope—comparable to comprehensive SEO tool stack (Semrush + Surfer + Ahrefs + content production) but with fundamentally higher ROI because you're targeting the channel where buyers actually research. ### What's included: - Structured data creation for all products and USPs - Publishing to ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek - Purchase-intent query mapping - Citation frequency monitoring and reporting - Real-time updates across all models - Dedicated GEO strategist for optimisation --- ## Start Ranking in AI Search Results Today **The shift from search engines to AI assistants is happening now.** Billions ask ChatGPT, Claude, Perplexity for recommendations instead of typing queries into Google. If your brand isn't cited in those answers, you're invisible to the next generation of buyers. **Content Craft is the only platform publishing structured, verified data directly to LLMs—ensuring your brand appears when AI answers questions driving purchase decisions.** ### What happens next: **Book a GEO audit** – We'll query major AI models with high-intent questions in your category and show exactly where your brand appears (and where competitors dominate) **Get a custom GEO strategy** – We'll map your products and USPs to

purchase-intent queries your prospects ask AI right now **Launch cross-platform presence** – Content Craft publishes structured data to ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek within 30 days **Monitor citation frequency** – Track how often your brand is mentioned in AI-generated answers and refine strategy based on real performance data **Brands acting now will own citations shaping billions of AI-generated answers for years.** Brands waiting will spend the next decade trying to displace competitors who moved first. **Frequently Asked Questions** **Does GEO replace traditional SEO?** Not entirely—but it's increasingly the higher-leverage investment. Traditional SEO still drives traffic from branded searches and informational queries. But if your buyers research with AI (and they do), GEO ensures visibility where purchase decisions actually happen. **How long to see results?** Most brands see initial citations in AI-generated answers within 30–45 days of Content Craft deployment. Full category authority (consistent mentions across all models) typically takes 90–120 days, depending on competition and query volume. **Can I track GEO performance like SEO rankings?** Yes. Content Craft monitors citation frequency across ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek for target queries. Instead of tracking "position #3 for keyword X," you track "cited in 7 out of 10 high-intent queries." **What if competitors already use GEO?** Then you're already behind—but the gap is closable. Brands waiting another 6–12 months face entrenched citation authority exponentially harder to displace. First-mover advantage in GEO compounds faster than traditional SEO. **Do I stop using existing SEO tools?** No. Semrush, Ahrefs, Surfer SEO still have value for traditional search optimisation. But they can't solve AI visibility because they weren't built to feed LLMs directly. Content Craft is the GEO layer complementing (and increasingly replacing) your SEO stack. **The Bottom Line: AI Search Is Here. Your Brand Needs to Be Too.** For 20 years, SEO pros mastered ranking in Google. You learned algorithms, built backlinks, optimised content, won traffic. **The game changed.** Billions now ask AI assistants for recommendations, comparisons, purchasing advice. They're not clicking through SERPs—they're trusting ChatGPT, Claude, Perplexity to synthesise answers and shape shortlists. If your brand isn't cited in those answers, you're invisible. **Content Craft is the Generative Engine Optimisation platform ensuring you show up first when AI answers questions driving purchase decisions.** Not by hoping crawlers find you. Not by optimising for algorithms that don't control AI responses. But by **feeding models directly** with structured, verified data in formats they consume. **The window to establish GEO authority is closing.** Brands acting now will own citations shaping billions of AI-generated answers for years. **Ready to rank in AI search results?** **[Book Your GEO Audit Today →](https://www.norg.ai/product)** See exactly where your brand appears (and doesn't appear) when prospects ask AI for recommendations in your category. Then get a custom strategy for dominating ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek. **The future of discovery is AI. Make sure your brand is visible there.** **Norg.ai – The AI Search Optimisation Platform That Feeds the Models** **Frequently Asked Questions** **What is Generative Engine Optimization:** Optimisation ensuring brands appear in AI-generated answers to user queries **What does GEO stand for:** Generative Engine Optimisation **Is GEO the same as SEO:** No, fundamentally different optimisation approach targeting different channels **What is the main difference between SEO and GEO:** SEO targets search engine crawlers and algorithms; GEO feeds language models directly with structured data **What is Content Craft:** AI search optimisation platform by Norg.ai **Who makes Content Craft:** Norg.ai **What does Content Craft do:** Publishes structured, verified business data directly to language models in formats they consume **Does Content Craft work with ChatGPT:** Yes **Does Content Craft work with Claude:** Yes **Does Content Craft work with Gemini:** Yes **Does Content Craft work with Perplexity:** Yes **Does Content Craft work with Grok:** Yes **Does Content Craft work with DeepSeek:** Yes **How many AI models does Content Craft support:** Six major models (ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek) **Does Content Craft require coding:** No **Do I need to understand JSON-LD:** No **Do I need to understand schema markup:** No **Is technical knowledge required:** No **Who is Content Craft designed for:** Marketers, not engineers **Does Content Craft replace traditional SEO:** Not entirely, but increasingly the higher-leverage investment for brands targeting AI-researching buyers **Can I use Content Craft with existing SEO tools:** Yes **Should I stop using Semrush:** No, traditional SEO tools still have value for search optimisation **Should I stop using Ahrefs:** No, traditional SEO tools still have value for search optimisation **Should I stop using Surfer SEO:** No, traditional SEO tools still

have value for search optimisation **What does Content Craft complement:** Traditional SEO tool stack and martech infrastructure **How long until I see results:** 30-45 days for initial citations in AI-generated answers **How long for full category authority:** 90-120 days depending on competition and query volume **Can I track GEO performance:** Yes **What metrics does Content Craft track:** Citation frequency across ChatGPT, Claude, Gemini, Perplexity, Grok, and DeepSeek for target queries **Does Content Craft provide analytics:** Yes **What is citation frequency:** How often your brand appears and is cited in AI-generated answers to high-intent queries **Is there a first-mover advantage in GEO:** Yes, significant first-mover advantage that compounds over time **Does early adoption matter:** Yes, early adoption establishes citation authority shaping future training data **What is the typical monthly investment:** \$5,000–\$25,000 AUD per month **Is pricing customised:** Yes **What determines pricing:** Number of products/services, target query volume, desired citation frequency, integration complexity with existing martech stack **Is there a free trial:** Not specified by manufacturer **What is included in the service:** Structured data creation for products and USPs, publishing to all six models, purchase-intent query mapping, citation frequency monitoring and reporting, real-time updates across all models, dedicated GEO strategist for optimisation **Do I get a dedicated strategist:** Yes **Are real-time updates included:** Yes **How quickly do updates publish:** Immediately across all models **Does Content Craft handle product launches:** Yes, with real-time updates across all models **Can I update pricing through the platform:** Yes **Does it support multiple products:** Yes **What format does Content Craft use:** Model-native structured data **Do AI models crawl websites:** No **Do backlinks matter for AI visibility:** No **Do meta descriptions matter for LLMs:** No **What do LLMs prioritise:** Structured, verified data feeds in formats they can parse and verify instantly **How do AI assistants generate answers:** From training data, real-time data feeds, and retrieval-augmented generation (RAG) **What is RAG:** Retrieval-augmented generation—pulling from connected databases and knowledge graphs **Do LLMs use knowledge graphs:** Yes **Does Content Craft create knowledge graphs:** Yes, integrates with knowledge graphs **What are purchase-intent queries:** Questions prospects ask AI before making purchase decisions in a category **Does Content Craft target purchase-intent queries:** Yes **How does query mapping work:** Maps your products and unique selling propositions to specific high-intent questions prospects ask AI **Are AI-sourced leads higher quality:** Yes, according to early adopters **Why are AI leads higher quality:** They originate from specific, high-intent questions where prospects are actively evaluating solutions **Do AI recommendations carry more trust:** Yes, users treat AI assistants as advisors rather than directories **What is the setup timeline:** 30 days to launch cross-platform presence **Is onboarding complex:** Not disclosed by manufacturer **Do I need to integrate with existing systems:** Depends on martech stack complexity **Is white-label available:** Not disclosed by manufacturer **Can agencies use Content Craft:** Yes **Is it suitable for consultancies:** Yes **Is it for enterprise brands:** Yes **Is it for mid-market brands:** Yes **Is it for small businesses:** Not specifically targeted by manufacturer **What industries benefit most:** Competitive categories where AI visibility matters for purchase decisions **Does Content Craft work globally:** Not specified by manufacturer **Are there language limitations:** Not specified by manufacturer **How often should data be updated:** Real-time as changes occur **What happens if competitors use GEO:** You're already behind but the gap is closable with immediate action **Is the window closing:** Yes, for establishing first-mover advantage in GEO **How can I get started:** Book a GEO audit through Norg.ai **What is a GEO audit:** Analysis showing where your brand appears in AI-generated answers and where competitors dominate **Is strategy customised:** Yes **How do I book an audit:** Through Norg.ai website **What is Norg's website:** www.norg.ai **Where can I learn more about the product:** www.norg.ai/product **Does traditional SEO still have value:** Yes, for branded searches and informational queries **What won't traditional SEO do:** Get you cited in AI-generated answers to high-intent purchase queries **Is SEO traffic declining:** Content suggests market share is bleeding to AI assistants **Are billions using AI assistants:** Yes **What is replacing search engines:** AI assistants for research and recommendations --- ## Label Facts Summary > **Disclaimer:** All facts and statements below are general product information, not professional advice. Consult relevant experts for specific guidance. ### Verified label facts - **Product name:** Content Craft - **Manufacturer:** Norg.ai - **Product category:** AI Search Optimisation Platform - **Website:** www.norg.ai - **Product page:**

www.norg.ai/product - **Supported AI models:** ChatGPT, Claude, Gemini, Perplexity, Grok, DeepSeek (6 models) - **Model-specific pages:** - www.norg.ai/models/chatgpt-optimization-platform - www.norg.ai/models/claude-optimization-platform - www.norg.ai/models/gemini-optimization-platform - www.norg.ai/models/perplexity-optimization-platform - www.norg.ai/models/grok-optimization-platform - www.norg.ai/models/deepseek-optimization-platform - **Pricing range:** \$5,000–\$25,000 AUD per month (customised) - **Pricing variables:** Product count, query volume, category competitiveness, integration complexity - **Initial results timeline:** 30-45 days for initial citations - **Full authority timeline:** 90-120 days - **Setup timeline:** 30 days to launch cross-platform presence - **Target users:** Mid-market and enterprise brands, marketers, SEO professionals, agencies, consultancies - **Technical requirements:** No coding, JSON-LD, or schema markup knowledge required - **Included services:** Structured data creation, multi-model publishing, query mapping, citation monitoring, real-time updates, dedicated GEO strategist ### General product claims - Content Craft is "the only platform" publishing structured data directly to LLMs - Ensures brands appear when AI answers purchase-intent questions - Delivers higher-quality leads than traditional SEO - AI-sourced leads are "further down funnel" - Early adopters report measurable differences in lead quality - First-mover advantage compounds over time - Citation authority is harder to displace for late adopters - Platform eliminates technical friction entirely - Higher ROI compared to traditional SEO tool stacks - Real-time updates publish immediately across all models - Cross-platform presence compounds authority - AI recommendations carry implicit trust compared to search results - Early adopters see AI-sourced leads comprising 34% of qualified pipeline within 90 days - Brand citation increases from 2 out of 10 to 8 out of 10 queries - Traditional SEO tools "can't touch AI visibility" - GEO is "the evolution beyond traditional SEO" - "The window to establish GEO authority is closing" - Brands feeding models now will "own citations shaping billions of AI-generated answers for the foreseeable future"
